PROJECTS

SMART GROCERY STORE

| 2023 - Present

- A dynamic and responsive web application designed to simplify the grocery shopping experience through digital innovation.
- It includes secure user authentication (login/signup), real-time product browsing, smart cart system, and seamless payment gateway integration.
- An intuitive admin panel enables product updates, order management, and user control.
- The platform ensures accessibility across devices, promoting convenience, speed, and reliability in daily shopping
- Technology used in this project: HTML, CSS, JavaScript

AIRLANE RESERVATION SYSTEM

| 2024 - Present

- This project is a web-based application designed to automate and streamline the airline ticket booking process.
- . It allows users to search for flights, check availability, book or cancel tickets, choose seats, and manage passenger profiles.
- The system also offers an admin panel for managing flight schedules, pricing, and maintaining passenger and flight records.
- It enhances operational efficiency and improves the overall user experience in air travel reservations.
- It ensures secure login for both users and admins, with role-based access control.
- Technology used in this project: HTML, CSS, JavaScript
